JOB TITLE

In my professional career I plan to change the world. I am studying electrical engineering with emphasis in space systems engineering and a minor in mathematics. I plan on paving the way to sustainable renewable energy. Along my path I am looking for experience in the professional world to strengthen my resume and qualifications. I am a hard worker and willing to dedicate myself fully to anything I put my mind to. An internship would help me as I continue my life as an engineer giving me real world applications of my experience and skills. Anyone willing to give me a shot and more experience in the professional world would not be let down.

I am passionate about designing and learning about all things electronic. From a young age I built my own simpler personal projects and as I've learned and achieved more my projects and growth only reflect that. Currently I am a Junior in the College of Engineering at Utah state and am looking for more opportunities starting fall 2024. I am a high achiever and have been passionate about my work as an electrical engineer since before I started University. I am eager to be at the front of tech and innovation in today's world.

I have much more experience personally and professionally in the field of engineering and would love to talk more about my qualifications and how I can add value to your operation. Thank you for taking the time to go over my cover letter and I hope to hear back from you shortly and hopefully have an interview!

Sincerely,

JOHN Cone
