EDUCATION

B.S. ELECTRICAL ENGINEERING, *Emphasis in Space Systems Design*

April 2026

Minor in Mathematics

Logan, Utah

Utah State University (USU)

3.65 GPA

Relevant coursework: Space Mission Design, Space Systems Engineering, Printed Circuit Board Design, Advanced Reconfigurable Computing, A.I. Architecture, Microcontroller Hardware and Software, Controls, Power Electronics

RELEVANT WORK EXPERIENCE

UTAH WATER RESEARCH LAB INTERN

October 2023 – May 2024

Utah State University

Logan, Utah

- Executed detailed technical specifications to assemble precision yield monitoring systems for agricultural use
- Designed specialized software for sensor communication protocols and system integration for yield monitors
- Validated equipment through systematic testing procedures, identifying and implementing design improvements

MUNICIPAL ENGINEERING INTERN

May 2024 - August 2024

Horrocks Engineering

Heber City, Utah

- Conducted comprehensive job site inspections in accordance with county regulations and specifications
- Facilitated strategic team meetings between city officials and contracted personnel to ensure project alignment
- Supervised general contractors and construction crews while providing technical expertise and project guidance
- Managed independent municipal projects including utility system assessments and roadway warranty evaluations

RESEARCHER

December 2024 – Present

Center for Space Engineering

Logan, Utah

- Designed many custom printed circuit boards (PCBs) for seamless system integration and interface compatibility
- Expertise in the design, debugging and testing complex hardware and software systems
- Authored and published peer-reviewed research paper on small satellite systems and technologies
- Selected to present research findings at the 2025 SmallSat Conference
- Ongoing thesis based master's research in implementing AI/ML algorithms on low power hardware

COMPUTER SKILLS

C	C++	Verilog/VHDL	Git	Linux	STK
Excel	KiCad	SolidWorks	MATLAB	Simulink	LTspice

PERSONAL PROJECTS AND EXPERIENCE

- Recipient of competitive Engineering Undergraduate Research Scholar grant award
- Payload team lead of Utah State University's 2026 IREC team
- Winner of Utah State University's Ignite Engineering Challenge for RGB LED cube design
- Developed and constructed IEEE engineering projects, including a musical tesla coil demonstration system

Other personal projects include an automated greenhouse, custom record player, and custom electrical power solutions such as a solar powered camper. Thank you for your consideration. :)
